

HOW WE HELP YOU MANAGE YOUR DENTAL HEALTH

By creating a Personalized Dental Plan for you, we help you to manage the road map to your dental health. While an average dentist will look at one tooth at a time, we prefer to be proactive and look at your mouth as a whole allowing you to predictably plan your dental future.

There are several steps involved in creating your personalized dental plan.

Consult:

We get to know you and your needs/desires and you are exposed to our practice and how we can help you.

X-rays/comprehensive examination:

Providing exceptional dentistry takes the proper diagnostic tools. The standard set of x-rays isn't enough for us. We use digital x-rays, models of your teeth, and tests to check the health of your gums and bite. We will examine your gums, teeth, and bite, and address any cosmetic concerns you may have.

Proposal of you Personalized Dental Plan:

We will present your Personalized Dental Plan to you and discuss your options with you.

Financial Arrangements:

Because exceptional dentistry is an investment in your dental health, we have designed convenient, comfortable payment plans if needed. You will always know the cost of your treatment prior to committing.

Maintenance:

Now that your Personalized Dental Plan is complete, maintenance is key. Frequency of cleanings and periodic x-rays is different for every guest. We will set up your maintenance schedule and assist you in keeping on schedule.
